

TO WHOM IT MAY CONCERN

This is to confirm that the Argentine National Data Repository (NDR) for Geological and Geophysical information (BDIH – Banco de Datos Integral de Hidrocarburos) was created and currently operated by Registros Mineros Argentinos (ReMASA) with the participation of GeoLeader Ltd. and PANINDIA as technical partner.

The BDIH system is based on the data bank software “PETROVISION” provided by GeoLeader. The system installation started on August 2007 and it is currently operating and serving.

We commend GeoLeader professionalism in the support aspects of PETROVISION software.

We are available for further inquiries or visits to the BDIH facilities.

Sincerely,

Ctdor. José Manuel Espiñeira
Project Manager
