## ATTESTATION

Petrovision has been used in Total for the last ten years, to manage corporate seismic data (acquisition and processing) from any part of the world. Whether data is stored on shelf (tapes), near line (robotic system) or on line (disk) Petrovision will be able to manage it.

Through years Total has carried out several transcription projects, the result of them is now on line, accessible through the application.

Most of all, Petrovision offers a fully open interface that can easily be customised, and with some help from Geoleader, there is no situation where data shouldn't find its place in the database thanks to the application.

Since Geoleader has the charge of development and maintenance, the interface has evolved quickly to our satisfaction and our needs. New products have been added. The highly skilled level of the Geoleader team, and their friendliness has made the relationship easy and reactive.

A handwritten signature in black ink, appearing to read "P. Monribo".

Patrick Monribo

Corporate Seismic Data Manager  
Pau - France
